

Sexual Assault or Rape - Male (Adult)

Algorithm 1091 | Adult (18 years and older) | Gender at birth: Male

Definition

- UAT-only, trauma-informed safety and healthcare-routing draft after suspected or disclosed sexual assault or rape for people aged 12 years and older; it does not replace trained clinical, forensic, safeguarding, or legal assessment.
- Adult patient.
- Male.

Initial assessment

1. [YES_NO] Can the caller speak privately and safely without the suspected perpetrator or another unsafe person hearing, seeing the screen, or accessing messages?
2. [OPEN_TEXT] Is the caller in immediate danger now, and what safe location and callback method may be used without increasing risk?
3. [YES_NO] Is there severe bleeding, breathing difficulty, loss of consciousness, suspected strangulation, severe head or neck injury, poisoning, severe pain, or another serious injury?
4. [YES_NO] Is there immediate risk of suicide, self-harm, or serious harm to another person?
5. [DURATION] When did the most recent assault happen? Ask only the minimum detail needed to arrange safe and time-sensitive care.
6. [YES_NO] Does the caller want urgent medical care or information about injury treatment, pregnancy prevention, STI or HIV care, psychological support, or forensic examination?
7. [YES_NO] For a child or adolescent, can they speak privately and is a safe, non-offending caregiver or safeguarding professional available?

Triage and redirect questions

1. Disposition level 78

Was there no sexual assault, with a non-sexual physical assault or injury now being the primary concern?

A non-sexual physical assault belongs in the physical-assault or injury pathway. Any sexual assault remains in this trauma-informed pathway.

1. Disposition level 100

Is the assault occurring now; is the caller in immediate danger; is safe communication impossible because the suspected perpetrator or an unsafe caregiver is present; or is there severe bleeding, breathing difficulty, loss of consciousness, suspected strangulation, severe head or neck injury, poisoning, severe pain, suicidal crisis, or another serious injury?

Immediate danger, life-threatening injury, strangulation symptoms, impaired consciousness, or acute suicide risk requires emergency response before routine forensic or follow-up care. Qatar's official emergency number is 999. Safety planning must not alert or confront a suspected perpetrator.

1. Disposition level 78

With no emergency feature above, does the caller need prompt specialist assessment for injuries, pregnancy risk, STI or HIV care, psychological support, safeguarding, or options for forensic examination, regardless of when the assault happened?

HMC's Sexual Assault Service provides specialist medical treatment, emergency contraception, STI/HIV assessment, psychological support, and forensic examination. WHO recommends urgent survivor-centred care and notes that HIV prophylaxis and emergency contraception are time-sensitive; care should still be offered after those windows and must not depend on forensic participation.

1. Disposition level 50

Is the caller currently safe with no emergency feature and seeking information, ongoing healthcare, or psychological support after a past assault?

Survivor-centred support remains appropriate regardless of when the assault occurred. HMC's specialist service accepts calls from survivors and people seeking advice; its trained team explains available care and Qatar legal processes.

Advice

Qatar emergency safety and injury response

- If it is safe to communicate, call Qatar emergency services on 999 and provide the location and immediate threat or injury. Do not ask the affected person to drive or self-transport; use the emergency response arranged by 999. Do not confront or alert the suspected perpetrator, and do not send messages or leave voicemail if that may expose the caller. Prioritize life-saving care over evidence preservation. Use only the caller's agreed safe callback method. For a child or adolescent, do not rely on a caregiver who may be involved or unsafe; follow the approved safeguarding escalation. Call Qatar 999 now, follow the call-taker's ambulance and emergency-transport instructions, and do not self-drive. Do not delay emergency care.
- Call Back If: ongoing danger; suspected strangulation or breathing difficulty; heavy bleeding; loss of consciousness; severe head or neck injury; suicidal crisis; unsafe caregiver or perpetrator present.

HMC specialist sexual-assault care

- Offer contact with HMC's Sexual Assault Service at Hamad General Hospital on +974 4025 6460 for specialist telephone triage and prompt medical, psychological, and forensic-care options. Explain that each part of history-taking, examination, treatment, documentation, and forensic evidence collection requires an appropriate consent process and that the person may ask to pause or stop. Some pregnancy and infection-prevention treatments are time-sensitive, so do not delay medical care. If the person wants to preserve possible evidence and it does not delay urgent care, avoid washing, eating, drinking, brushing teeth, or changing clothes after relevant contact; if any of these have already happened, still offer specialist care. Do not promise confidentiality or a choice about reporting until the HMC team has explained Qatar legal processes and the organization's approved safeguarding duties.
- Call Back If: new or worsening injury; breathing or swallowing difficulty after neck pressure; caller's safety changes; suicidal thoughts.

Trauma-informed ongoing support

- Listen without blame, avoid asking the person to repeat unnecessary details, and affirm that the assault was not their fault. Offer HMC's Sexual Assault Service on +974 4025 6460 for advice and healthcare options even when the assault was not recent. Agree a safe contact method and explain confidentiality and its limits before recording or sharing sensitive information. Child/adolescent consent, caregiver involvement, mandatory reporting, and referral actions remain subject to the approved Qatar safeguarding pathway.
- Call Back If: caller's safety or wellbeing changes; new injury symptoms; suicidal thoughts.

First aid

- If it is safe to communicate, call Qatar emergency services on 999 and provide the location and immediate threat or injury. Do not ask the affected person to drive or self-transport; use the emergency response arranged by 999. Do not confront or alert the suspected perpetrator, and do not send messages or leave voicemail if that may expose the caller. Prioritize life-saving care over evidence preservation. Use only the caller's agreed safe callback method. For a child or adolescent, do not rely on a caregiver who may be involved or unsafe; follow the approved safeguarding escalation. Call Qatar 999 now, follow the call-taker's ambulance and emergency-transport instructions, and do not self-drive. Do not delay emergency care.
