

Eye - Redness - Male (Adult)

Algorithm 1405 | Adult (18 years and older) | Gender at birth: Male

Definition

- Red eye assessment decomposed from NHS.UK's published red eye guidance.
- Adult patient.
- Male.

Initial assessment

1. [DURATION] How long has the eye been red?
2. [YES_NO] Any vision change, pain, or discharge?
3. [YES_NO] Does the person wear contact lenses?

Triage and redirect questions

1. Redirect → Eye - Allergy

Are itching, watering, and allergy symptoms the main concern without significant pain, injury, chemical exposure, or vision change?

Eye symptoms dominated by an allergic pattern belong in the Eye - Allergy pathway.

1. Disposition level 100

Along with the red eye, is there vision change (wavy lines, flashing, loss of vision), severe light sensitivity, a severe headache with nausea, very dark redness, an eye injury or object in the eye, chemical exposure, or unequal pupil sizes?

NHS.UK red eye guidance lists these as emergency-assessment criteria.

1. Disposition level 70

Is a baby under 28 days old affected, is the eye very painful and red, or is there redness with contact lens wear?

NHS.UK guidance recommends urgent clinical or optician review for these situations - contact-lens-related redness can indicate a serious infection.

1. Disposition level 15

Is this mild redness with none of the features above?

NHS.UK guidance describes mild red eye as often resolving within a few days.

Advice

Qatar emergency red-eye precautions

- Call Qatar emergency services on 999 now for sudden vision loss, severe eye pain with headache or vomiting, penetrating injury, or serious chemical exposure, and follow the call-taker's instructions. Do not drive. Do not rub, press, patch, or put unprescribed drops in the eye, and remove contact lenses only if this is easy and they are not stuck. For chemical exposure, immediately irrigate continuously with clean lukewarm water while arranging emergency help; do not delay irrigation to complete this assessment. Call Qatar 999 now, follow the call-taker's ambulance and emergency-transport instructions, and do not self-drive. Do not delay emergency care.
- Call Back If: worsening or lost vision; severe or worsening pain; chemical or penetrating injury.

Urgent red eye review

- Stop wearing contact lenses and arrange same-day medical or eye-care review.
- Call Back If: pain worsens; vision changes develop.

Home care for mild eye redness

- Avoid touching or rubbing the eye and stop wearing contact lenses until it clears. It should improve within a few days.
- Call Back If: persists beyond a few days; sticky discharge or pain develops.

First aid

- Call Qatar emergency services on 999 now for sudden vision loss, severe eye pain with headache or vomiting, penetrating injury, or serious chemical exposure, and follow the call-taker's instructions. Do not drive. Do not rub, press, patch, or put unprescribed drops in the eye, and remove contact lenses only if this is easy and they are not stuck. For chemical exposure, immediately irrigate continuously with clean lukewarm water while arranging emergency help; do not delay irrigation to complete this assessment. Call Qatar 999 now, follow the call-taker's ambulance and emergency-transport instructions, and do not self-drive. Do not delay emergency care.
