

Hip Pain - Male (Adult)

Algorithm 1459 | Adult (18 years and older) | Gender at birth: Male

Definition

- UAT-only adult and pediatric non-traumatic hip-pain pathway screening for septic arthritis, systemic illness and inability to stand or bear weight before in-person assessment.
- Adult patient.
- Male.

Initial assessment

1. [LOCATION] Where exactly is the pain?
2. [DURATION] How long has the pain lasted?
3. [YES_NO] Is the person able to bear weight normally?
4. [OPEN_TEXT] What is the age; is there systemic illness, pregnancy/recent birth, recent infection/procedure, night pain, immune risk, hidden trauma, or "in a child" refusal to walk/use the limb or safeguarding concern?

Triage and redirect questions

1. Redirect → Motor Vehicle Accident

Did this problem begin with a motor vehicle crash or as part of a multi-system crash injury?

A motor vehicle crash or multi-system crash injury belongs in the Motor Vehicle Accident pathway.

1. Disposition level 100

Is hip pain severe with inability to stand or bear weight, or accompanied by marked systemic illness, confusion, breathing change, collapse or rapid deterioration, including a seriously unwell child?

NHS.UK joint pain guidance identifies these as reasons for urgent clinical review; the local Qatar urgent-care pathway is used here.

1. Disposition level 70

With no emergency feature, is there any persistent or unexplained hip pain, limp/functional limitation, pregnancy/postpartum state, night pain, child concern or higher-risk context?

In-person assessment is required; every child joint problem needs clinical review and telephone triage cannot exclude serious hip pathology.

Advice

Qatar emergency hip response

- Call Qatar emergency services on 999 for a hot painful joint with systemic illness, inability to stand or bear weight, severe rapidly worsening pain, or a seriously unwell child. Do not allow self-driving or force walking. Call Qatar 999 now, follow the call-taker's ambulance and emergency-transport instructions, and do not self-drive. Do not delay emergency care.
- Call Back If: fever/systemic illness; cannot walk or bear weight.

In-person hip assessment

- Arrange in-person assessment. Any child hip/joint problem, pregnancy/postpartum pain, night pain, functional loss or unexplained persistent pain requires an age-appropriate pathway. Medication and exact Qatar destination are local approval required.
- Call Back If: pain worsens; walking difficulty; swelling, redness or fever.

First aid

- Call Qatar emergency services on 999 for a hot painful joint with systemic illness, inability to stand or bear weight, severe rapidly worsening pain, or a seriously unwell child. Do not allow self-driving or force walking. Call Qatar 999 now, follow the call-taker's ambulance and emergency-transport instructions, and do not self-drive. Do not delay emergency care.
